EDUCATION

Rutgers University

B.S. in Computer Science and Data Science

New Brunswick, NJ

Expected December 2027

- GPA: 3.90 | Dean's List
- Coursework: Data Structures and Algorithms, Computer Architecture, Discrete Structures, Data Science

EXPERIENCE

Software Engineer Intern

Heller Industries

May 2026 – August 2026

Florham Park, NJ

- Built a C#/.NET WPF data-ingestion workflow using JSON validation and schema transformation, enabling multiple industrial equipment configurations to populate shared application models
- Developed a time-series comparison tool using sensor-channel mapping and linear interpolation, producing five process KPIs and bounded temperature-difference analysis
- Designed a restart-recoverable analytics model using one persistent CSV record per completed production run to support historical chart and calculation-state restoration from stored data

Software Engineer Intern

Data Storytelling

May 2025 – August 2025

Milltown, NJ

- Extended a PayPal payment workflow using Supabase transaction persistence and identifier propagation, preventing ticket creation after failed inserts and linking payments to tickets and receipts
- Built a persistent raffle-results workflow using Supabase-backed winner records and retrieval, restoring results across sessions and enabling buyers to verify tickets
- Developed a purchase-confirmation workflow using generated PDF receipts and calendar exports, giving buyers portable payment, ticket, and raffle-drawing records

PROJECTS

URL Shortener | *Java, Spring Boot, React, PostgreSQL, Redis, Flyway*

- Built and deployed a Spring Boot URL shortener with a React frontend using 11 REST endpoints, supporting link creation, owner-scoped management, expiration, redirects, and click analytics
- Implemented Redis read-through caching with PostgreSQL fallback and transactional click persistence, enabling cached destination lookup while preserving durable click analytics

Image Processor | *TypeScript, NestJS, React, PostgreSQL, BullMQ, Redis*

- Built and deployed a NestJS image-processing platform with a React frontend using signed object-storage uploads and BullMQ workers, supporting asynchronous batch resizing and WebP conversion
- Orchestrated per-image jobs using deterministic IDs, exponential-backoff retries, concurrent workers, and scheduled cleanup, maintaining persistent lifecycle state across processing failures and retries

Live Chat | *Java, Spring Boot, React, PostgreSQL, WebSockets, STOMP*

- Built and deployed a Spring Boot messaging application with a React frontend using REST APIs, PostgreSQL persistence, and real-time delivery, supporting direct, group, and public conversations
- Implemented persist-before-broadcast message delivery using transactional JPA workflows, maintaining durable messaging, friendship, and conversation state across five relational entities

TECHNICAL SKILLS

Languages: Java, C#, TypeScript, JavaScript, Python, C++, SQL

Frameworks: Spring Boot, .NET Framework, WPF, NestJS, React, JPA, Prisma

Tools: PostgreSQL, Supabase, Redis, BullMQ, Flyway, Docker, Git, WebSockets, STOMP
